

ANALYZE THIS CODE AND SPECIFY THE FINAL CONTENTS IN t0, t1, t2, t3

.data

→ z: .word 11
 n: .word 8
 → w: .word 2, 0, 1, 7, -2, 5, 9, 3, 11, 17, -31

.text

lui t0, 0x10010
 lw t1, 24(t0)
 lw t2, 28(t0)
 or t3, t1, t2

t0 → contains 10010000
 t1 → = -2
 t2 → = 5
 t3 → = -1

$$\begin{array}{rcl} -2 & = & 1110 \\ 5 & = & 0101 \\ \hline 1111 & = & -1 \text{ (in 2-compl)} \end{array} \quad \text{OR}$$

.data

.asciz "Alessandro"

#this takes 11 bytes

.align 2

this aligns you to a multiple of 4 (12 in this case)

.word 5, 7, 8

x: .word 6

align K → 2^K

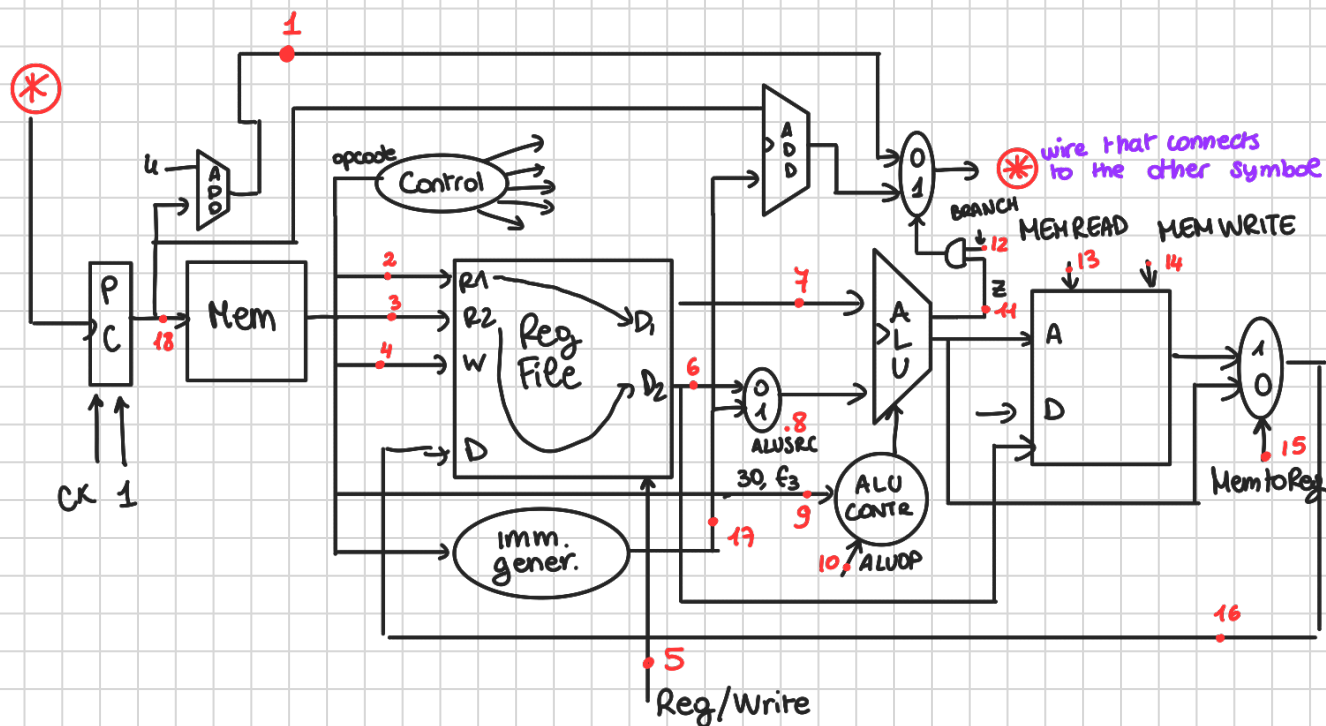

.text

la t0, x # translate this pseudo into raw instr.

lui t0, 0x10010
 addi t0, t0, 24] EXTENDED

lw t0, x # translate into raw instr.

lui t0, 0x10010
 lw t0, 24(t0)] EXTENDED
